

APPENDIX A –

DETAILED TABLES: ASSET VALUES IN IDENTIFIED HAZARD AREAS

Appendix A contains detailed tables presenting the numbers of parcels wholly or partially within delineated hazard areas (i.e. for those identified hazards for which the occurrence or impact is not considered to apply uniformly across the whole county) and associated improved property values broken down by land use and development type.

Affected improvement values have been calculated on a pro-rata basis: the value of improvements exposed to a hazard on any parcel is assumed to be proportional to the percentage of the parcel area covered by the hazard zone. It should be noted that this method will result in inflated parcel counts where a parcel is covered by more than one unique hazard zone.

Delineated hazards presented in this Appendix:

Dam Failure
Flooding
Landslide
Earthquake (Seismic Hazard)
Earthquake (Soil Type)
Wildfire
